

1. What is git? Why is it useful? What is the git workflow?

Git is a tool which is used by developers to share their code to work together and store code in a safe way in web-cloud.

We can use CMD "git push" command to sync all files in repository folder in git Hub in seconds.

2. What are the 8 primitive data types in Java? What makes them each unique? What values can they hold?

int - an integer

double - decimal places ex. 32.89235

Float - precision decimal data type 45.3987

long - like an int, numbers can be higher

short - like an int, less of number range

byte - 8 bits of data

Char - a single character - a B A &

Boolean - true or false

3. What is your favorite thing you learned this week?

Good to learn about Variables and good to see how to sys.out my code to see how it prints out.
